

Disc Plate Hanger

EASY TO USE INSTRUCTIONS:

Applying:

First clean the plate, (even if the plate is new, as surface contamination may inhibit adhesion).

Using the fingers mix a little water into the glue on the adhesive side of the disc and slowly agitate with your finger to activate the glue. Leave for 5-10 minutes until the glue becomes "tacky".

Apply the disc to the back of the plate (ensure the hook is in the correct position for plate design). Press down firmly and rub well to expel any air.

Leave to dry overnight.

Before hanging, test the strength of the adhesion by pulling firmly on the ring.

Removal:

The Disc removes completely in warm water and will not remove back stamps, glazes, or any other markings.

Information kindly provided by the manufacturer.
